

Outdoor  
Science  
Learning at  
St Chads

We love Science at St Chad's and what could be more fun than Science outside? Our garden is developing really well. We are growing vegetables

We are lucky to have a specialist gardening teacher Hannah Moore, who is helping us to learn about the life cycle of plants. We have planted potatoes under the soil and they have started to grow.

We have also planted lots of onions and they taste amazing. Parents will get the opportunity to buy them at our plant sale next term

Outdoor  
Science Learning  
at Chads

Our extra curricular gardening club is lots of fun too. With the help of the money were given by the Mary Jane Fund, we are developing our sensory prayer garden

We do lots of drilling and sawing wood to make the benches, which great fun and we are learning lots of new skills

is

Members of our extra curricular gardening club

We are always discussing science in school and looking at it all around us. As we were typing this newsletter, we noticed that the was sun shining through the window and how it reflected into our ICT suite. This happens because light reflects at the same angle as it hits the surface.

Don't miss next month's edition where we will be sharing photos of being presented with a cheque for £500 from Malcolm Smith from Severn Trent!
